

AGED INVENTORY & WORKING CAPITAL REPORT

Computer Accessories Seller — Inventory Stock Value Analysis

■3.93 Crore	10	73.67%
Total Stock Value	Inventory Categories	Value in Top 3 Categories

This report analyzes the supplied pivot table for a computer accessories seller. It identifies inventory concentration, high-value products, data-quality concerns, and practical actions to reduce aged stock and unlock working capital.

Scope limitation: The supplied pivot contains stock value by category and product, but it does not include Age in Days or purchase/last-movement dates. Therefore, the exact value of inventory older than 360 days cannot be calculated from this pivot alone.

1. Executive Summary

1. The total stock value is **■3,93,10,919**, approximately **■3.93 crore**.
2. Accessories represent **30.29%** of inventory value, while Storage represents **28.79%**.
3. Accessories and Storage together account for **59.08%** of total stock value.
4. Accessories, Storage and Components together account for **73.67%** of total stock value.
5. Samsung SSD 1TB is the highest-value individual product at **■42,47,920**.
6. The inventory review should prioritize high-value categories and products after combining stock value with verified age information.

Management Focus

Focus Area	Evidence	Suggested Action
Storage	28.79% of inventory value	Review SSD/HDD demand, replenishment and aged stock.
Accessories	30.29% of inventory value	Use bundles, promotions and reorder-level review.
Components	14.59% of inventory value	Review RAM/component demand and obsolete specifications.
360+ day stock	Age data not supplied	Create an age bucket and prioritize verified aged SKUs.

2. Stock Value by Category

Category	Stock Value	% of Total
Accessories	■11,906,929	30.29%
Storage	■11,317,675	28.79%
Components	■5,734,940	14.59%
Printers	■3,177,200	8.08%
Consumables	■1,939,800	4.93%
Spare Parts	■1,922,370	4.89%
Networking	■1,737,110	4.42%
Security	■819,630	2.08%
Electrical	■677,265	1.72%
Furniture	■78,000	0.20%

Finding: Accessories and Storage are the two largest inventory categories. Together they represent 59.08% of the total stock value. Adding Components increases the concentration to 73.67%. These categories should receive the first detailed aging and demand review.

3. Top 10 Products by Stock Value

Product	Stock Value	% of Total
Samsung SSD 1TB	■4,247,920	10.81%
RAM 16GB DDR4	■2,730,160	6.95%
SSD 512GB Samsung	■2,443,880	6.22%
Logitech Mouse	■2,325,779	5.92%
RAM 8GB DDR4	■2,150,180	5.47%
WD HDD 2TB	■2,064,470	5.25%
SSD 256GB Samsung	■2,014,230	5.12%
HP Ink Cartridge	■1,774,575	4.51%
Dell Keyboard	■1,521,082	3.87%
Canon Ink Cartridge	■1,402,625	3.57%

Finding: Samsung SSD 1TB has the highest stock value at ■42.48 lakh, followed by RAM 16GB DDR4 and SSD 512GB Samsung. High-value SKUs should be ranked by age, sales velocity and margin before selecting clearance or promotional actions.

4. Data-Quality Issues

The pivot contains product names that may represent duplicate or variant SKUs. These should be checked against the product master before making purchasing or liquidation decisions.

Possible Product Variants	Reason for Review
Graphic Card GTX1650 / GTX 1650 Graphic Card	May be the same product with different naming.
SSD 256GB / SSD 256GB Samsung	Could be generic versus branded SKU, or a naming duplicate.
SSD 512GB / SSD 512GB Samsung	Requires SKU-level confirmation.
WiFi Adapter / WiFi Adapter USB	May be different products or inconsistent naming.

Recommended cleaning: create a unique SKU code, standardize product names, separate brand/model/specification fields, and map all variants to the correct SKU.

5. 360+ Day Aging Framework

Age Bucket	Interpretation	Suggested Action
0–90 days	Young/normal stock	Monitor demand and maintain normal replenishment.
91–180 days	Early slow-moving signal	Review sales velocity and reorder settings.
181–360 days	Aged-risk inventory	Bundle, promote, transfer or reduce replenishment.
360+ days	Critical aged inventory	Prioritize clearance/liquidation after demand and margin review.

Required fields: SKU/Product, Category, Stock Quantity, Unit Cost, Stock Value, Purchase Date or Last Movement Date, Age in Days, Age Bucket, Sales Velocity, and Reorder Level.

6. Recommendations

Prioritize high-value categories: Begin with Accessories, Storage and Components because they represent 73.67% of inventory value.

Create a 360+ day exception report: Filter inventory older than 360 days and rank it by stock value for weekly review.

Reduce unnecessary replenishment: Pause or reduce purchasing for verified slow-moving SKUs until stock reaches the target level.

Use bundles and promotions: Bundle keyboards, mice, cables, cooling pads and other accessories with compatible products.

Review obsolete specifications: Check older RAM, SSD, HDD and component specifications against current demand.

Standardize SKU names: Remove reporting duplication by mapping variants to a unique SKU master.

Track working-capital release: Measure opening aged stock, cleared stock, discount impact and closing aged stock.

7. Recommended Dashboard Design

Dashboard Element	Visual / KPI	Purpose
Top KPI	Total Stock Value	Show total capital tied up in inventory.
Top KPI	360+ Day Stock Value	Show critical aged inventory exposure.
Top KPI	% Stock Older Than 360 Days	Measure aging severity.
Top KPI	Potential Working Capital Release	Track targeted stock reduction value.
Chart	Stock Value by Category	Show category concentration.
Chart	Top 10 Aged SKUs	Prioritize high-value aged products.
Chart	Inventory by Age Bucket	Compare 0–90, 91–180, 181–360 and 360+ days.
Action Table	SKU, Age, Stock Value, Action	Convert analysis into operational decisions.

Conclusion: The supplied pivot shows ■3.93 crore of stock value, with inventory concentrated mainly in Accessories and Storage. The next step is to combine this analysis with verified age-in-days data so that stock older than 360 days can be isolated, prioritized and converted into measurable working-capital release actions.
